

# GOTTESMAN RESIDENTIAL

If you're not sure how to use them, just follow these steps:

1. If you do not have it already, install the Lightroom app from the Google Play Store for Android devices or iTunes for Apple devices.
2. Download the presets you would like to use. If you download on your laptop you can either send them to your phone via Airdrop, iCloud Drive, DropBox, or via email. We find that Airdrop works best.
3. In your Photos, click on the preset (one at a time). Then click the arrow on the bottom left to open it. Scroll through your apps to choose Lightroom. Click "Launch Lightroom Now".
4. When imported, click the preset then click the three-little-dots icon in the top right which will open a dropdown menu. Click "Create Preset".
5. Here you can name the preset and create an album to put it in – this will help you see where you put the presets. We called ours "Gottesman Residential | Austin".
6. Now upload any photo you wish to edit. At the bottom, scroll to Presets and select the preset you wish to use and voilà!
